SUMMARY

Data Science postgraduate with hands-on experience in data cleaning, analysis, and visualization. Proficient in Python, SQL, Excel, and statistical analysis, with a strong interest in solving business problems through data insights.

EDUCATION

Master's Degree in Data Science	2025
GITAM Deemed University GPA: 9.00	Visakhapatnam, India
Bachelor's Degree in Computer Applications	2023
GITAM Deemed University GPA: 8.72	Visakhapatnam, India

EXPERIENCE

Junior Data Analyst	August 2025 - October 2025
IAMAI Pvt. Ltd.	
Developed a Data Preparation Tool (DPT) to clean and transform raw data for analysis. Implemented features to remove duplicates, handle missing values, and standardize formats, while automating data preparation workflows to improve data quality and readiness for business intelligence.	
Data Science Intern	July 2024 - August 2024
Prodigy Infotech Pvt. Ltd.	
- Built 3 interactive dashboards using Excel and Python to track sales KPIs and performance. - Conducted EDA on 50K+ records to identify revenue and customer trends. - Delivered data-driven insights that improved reporting efficiency by 30%.	

TECHNICAL SKILLS

- Data Analysis Tools:** Python, R, SQL
- Visualization Tools:** Tableau, Power BI, Matplotlib
- Machine Learning Libraries:** Scikit-learn, TensorFlow, Keras
- Database Management:** MySQL, PostgreSQL, SQLite
- Project Management Tools:** Trello, JIRA
- Data Tools:** Excel, Google Sheets, Pivot Tables
- Web Technologies:** HTML, CSS, JavaScript
- Statistical Analysis:** SPSS, Stata
- Source Control:** Git, GitHub

PROJECTS

Spam Detection System
Focused on classifying spam SMS messages, I developed machine learning models employing Python and TF-IDF for effective text classification. This project achieved a notable accuracy rate of 94% over a dataset exceeding 15,000 SMS examples.
Sales Insights Dashboard
This project focused on discovering key sales trends using EDA. Created dashboards integrating analytics from Python and Excel to identify top-performing products and regions, revealing up to a 30% growth opportunity.
Sentiment Analysis
Analyzed consumer sentiment towards products using a custom-built NLP model with Python, NLTK, and TextBlob. Achieved an impressive accuracy of 89% along with a determination of 68% positive sentiment among customer feedback.

CERTIFICATIONS

- Python Programming Essentials
- Introduction to Data Analysis Using Excel
- Open School Programming Certification
- Data Visualization Project
